DAX Formula Reference | Power BI | By Yogesh Gadekar (YSG)

Table Name: lifescience_india_dataset	Dataset: 1,000 Rows · 29 Columns	Currency: INR (₹)	Period: 2022 – 2024
---	---	--------------------------	----------------------------

Revenue KPIs

01	Total Revenue Total Revenue = SUM(lifescience_india_dataset[Net_Revenue_INR]) <i>Sums all net revenue after discount across all records.</i>
02	Total Profit Total Profit = SUM(lifescience_india_dataset[Gross_Profit_INR]) <i>Sums gross profit across all records.</i>
03	Gross Margin % Gross Margin % = DIVIDE([Total Profit], [Total Revenue], 0) * 100 <i>Uses DIVIDE to safely avoid divide-by-zero error.</i>
04	Total Units Sold Total Units Sold = SUM(lifescience_india_dataset[Units_Sold]) <i>Total quantity of units sold across all transactions.</i>
05	Avg Discount % Avg Discount % = AVERAGE(lifescience_india_dataset[Discount_Pct]) * 100 <i>Average discount percentage across all transactions.</i>

Clinical KPIs

06

Total Patients

Total Patients =

```
SUM(lifescience_india_dataset[Patient_Count])
```

Total number of patients served across all records.

07

Compliance Rate %

Compliance Rate % =

```
AVERAGE(lifescience_india_dataset[Compliance_Rate_Pct])
```

Average patient medication compliance rate.

Spend & Growth

08

Total RnD Spend

Total RnD Spend =

```
SUM(lifescience_india_dataset[RnD_Spend_INR])
```

Total research and development expenditure in INR.

09

YoY Growth %

YoY Growth % =

```
DIVIDE(  
  [Total Revenue] - CALCULATE([Total Revenue],  
    DATEADD(lifescience_india_dataset[Sale_Date], -1, YEAR)),  
  CALCULATE([Total Revenue],  
    DATEADD(lifescience_india_dataset[Sale_Date], -1, YEAR)),  
  BLANK()  
  ) * 100
```

Year-over-Year revenue growth. Returns BLANK if no prior year data exists.

10

Revenue by Region %

Revenue by Region % =

```
DIVIDE(  
  [Total Revenue],  
  CALCULATE([Total Revenue],  
    ALL(lifescience_india_dataset[Region])),  
  0  
  ) * 100
```

Each region's % share of total revenue. ALL() removes the region filter context.

How to Add Measures in Power BI

Step 1	Open Power BI Desktop → load lifescience_india_dataset.csv via Home > Get Data > Text/CSV
Step 2	Click on the lifescience_india_dataset table in the Fields pane on the right
Step 3	Go to Home > New Measure (or right-click the table > New Measure)
Step 4	Paste the DAX formula and press Enter
Step 5	Repeat Steps 3–4 for all 10 measures — they appear with a calculator  icon
